

Guide to Configure SharePoint Integration

1. SharePoint Username

Enter the email address associated with your SharePoint account.

This is typically your organizational email address, e.g., healthcareautomation@thinkbridge.in.

2. SharePoint Password

Provide the password for the SharePoint account.

Make sure this field is secure and masked in the UI to prevent unauthorized access.

3. SharePoint URL

Enter the base URL for your SharePoint site.

It usually looks like: https://<organization>.sharepoint.com/sites/<site-name>.

Example: https://thinkbridge.sharepoint.com/sites.

4. SharePoint App ID

Provide the App ID generated when you registered your application in Azure Active Directory or SharePoint app registration. This App ID uniquely identifies your app.

5. SharePoint Folder Path

Specify the relative path to the SharePoint folder where files will be stored or retrieved.

Example: TestSharepoint

6. Account Secret ID

Enter the secret or client key associated with the SharePoint App ID.

This is used for authentication and should be securely stored.

Example: o~y8Q~YUVO8Oawiehpms7.ybWFM\

7. Default Folder Path

Enter the full folder path where the default SharePoint operations will occur.

This is usually in the format: Shared Documents/<Folder Structure>

Example: Shared Documents/General/Healthcar

Guide to Configure SharePoint Integration

Final Step

Ensure that all the above fields are filled in correctly.

Click 'Save' or 'Connect' to establish the SharePoint integration.

Verify access by uploading or retrieving a test document from the configured folder.
